

# *Purolator Filters NA LLC*

## *Sales & Marketing Bulletin*

Bulletin Number: FP09-03

March 23, 2009

CUSTOMER: Purolator Filter Customers

SUBJECT: Cartridge Oil Filters L25608, L25609, and L25702.

- Purolator Filters NA LLC has identified a potential installation concern with Toyota cartridge oil filters L25608, L25609, and L25702. These filters fit various 2008-09 Toyota and Lexus models.
- The oil filter housing centertube may become disconnected from the Relief Valve Assembly when removing the old oil filter. The following procedures are recommended during removal of the oil filter.
  - Remove cartridge oil filter housing cap located on engine block.
  - Inspect inside of housing cap assembly to ensure the centertube did not disconnect from assembly and become lodged inside the oil filter.
  - If centertube disconnected from the Assembly and remains inside of old oil filter, remove centertube from oil filter and re-secure to Assembly by pushing dimpled ends down onto the assembly.

**Dimpled end of Centertube snaps onto dimpled end of Relief Valve Assembly. Centertube could accidentally be disconnected and remain stuck inside cartridge oil filter**

**Internal view of housing cap WITHOUT Centertube affixed to Relief Valve Assembly. Centertube is stuck inside old oil filter and requires removal.**

**Internal view of housing cap WITH Centertube affixed to Relief Valve Assembly. New oil filter can be installed.**
